

## **Abstract**

Provided is a system for making a digital image, stored in a portable memory device, available over a computer network through an online server. The system comprises a computer and a portable memory device reader, communicatively connected to the computer and being connectable to the portable memory device. Also included are an image transfer module, connected to the memory device reader and configured to detect the coupling of the device to the reader and to copy the digital image from the memory device to the computer memory, by way of said reader and a file uploader module, connected to the image transfer module and configured to send the digital image to the online server, connected to the computer network. The system further includes the online server, which is selectively connected to the file uploader module and accepts, stores and makes available over the network the digital image.
